Authorization for this examiner's amendment was given in a telephone interview with John E. Reilly on April 16, 2004.

The application has been amended as follows:

- Please cancel claims 6, 14-15, and 20-21.
- Please amend claims 1, 9, 12, 16-17, and 19 as follow:

1. A fitting for connecting a cable having an electrically conductive member to another electrically conductive member, said fitting comprising:

a sleeve member of a continuous cylindrical configuration sized for insertion of an end of said cable therein; and

a cylindrical crimping member having at least one inner tapered annular surface portion extending from a rib at its leading end dimensioned to advance over said sleeve member, said inner tapered annular surface portion disposed in close-fitting engagement with said sleeve member whereupon axial advancement of said crimping member along said sleeve member will impart inward radial deformation to said sleeve member into sealed engagement with an external surface portion of said cable[.];

Art Unit: 2833

wherein said sleeve member has an entrance end for insertion of said end of said cable and an external wall surface diverging rearwardly away from said entrance end for a distance and terminating at an external shoulder.

9. A fitting according to claim 1 wherein said [first locking member is defined by a circular] rib composed of a material of limited resiliency which will compress as it advances along said outer sleeve member and will expand after it clears said external shoulder.

12. A fitting for connecting a cable having an electrically conductive member to another electrically conductive member, said fitting comprising:

a thin-wall sleeve member of a continuous cylindrical configuration sized for axial insertion of an end of said cable therein, said sleeve member provided with an external catch thereon; and

a cylindrical crimping member having at least one inner tapered annular surface portion extending radially outwardly of said [said] sleeve member including a circular rib projecting radially inwardly from a leading end of said tapered annular surface portion whereupon axial advancement of said crimping member along said sleeve member said rib will undergo compression as it is advance along said sleeve member then expand into engagement with said external catch and continued advancement of said crimping member will impart inward radial deformation to said sleeve member into sealed engagement with an external surface portion of said cable[.];

wherein said sleeve member has an entrance end for insertion of said end of said cable and an external wall surface diverging rearwardly away from said entrance end for a distance corresponding to the length of said inner tapered annular surface portion and terminating at an external shoulder.

16. A fitting according to claim [15] 12 wherein said sleeve member tapers toward said entrance end from a point in proximity to said external shoulder.

17. A fitting according to claim 12 wherein said [circular] rib is composed of a material of limited resiliency which will compress as it advance along said outer sleeve member and will expand after it clears said external shoulder.

19. A connector for connecting a coaxial TV cable to a terminal wherein said cable has an outer resilient jacket, inner and outer spaced electrically conductive portions and wherein said connector has a fastener for connection to said terminal and a body provided with inner and outer concentric sleeve members with axially spaced sealing ribs on an inner surface of said outer sleeve member for insertion of said inner electrically conductive portion within said inner sleeve member and insertion of said outer electrically conductive portion between said inner sleeve member and said outer sleeve member, the improvement comprising:

an annular crimping member having a first inner tapered annular surface portion at lest as great as an outer diameter of said outer sleeve member and disposed in outer surrounding relation to said outer sleeve member and a second inner tapered annular surface portion

Art Unit: 2833

converging rearwardly from said first inner tapered annular surface portion wherein slidable axial advancement of said crimping member with respect to said outer sleeve member will impart inwardly radial deformation to said outer sleeve member into sealed engagement with an external surface of said cable[.];

wherein said crimping member has a circular rib projecting radially inwardly from a leading end of said inner tapered annular surface portion; and

wherein said outer sleeve member has an external shoulder and an external tapered surface portion converging rearwardly from said external shoulder.

2. The following is an examiner's statement of reasons for allowance:

Regarding claims 1-5, 7-13, 16-19, 22-25, the prior art of record fail to teach the sleeve member has a tapered external surface terminating at its external shoulder.

Regarding claims 26-36, the prior art of record fails to teach a connector having two crimping members.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
